

BLUEHUB MOBILE APPLICATION PRODUCT OVERVIEW

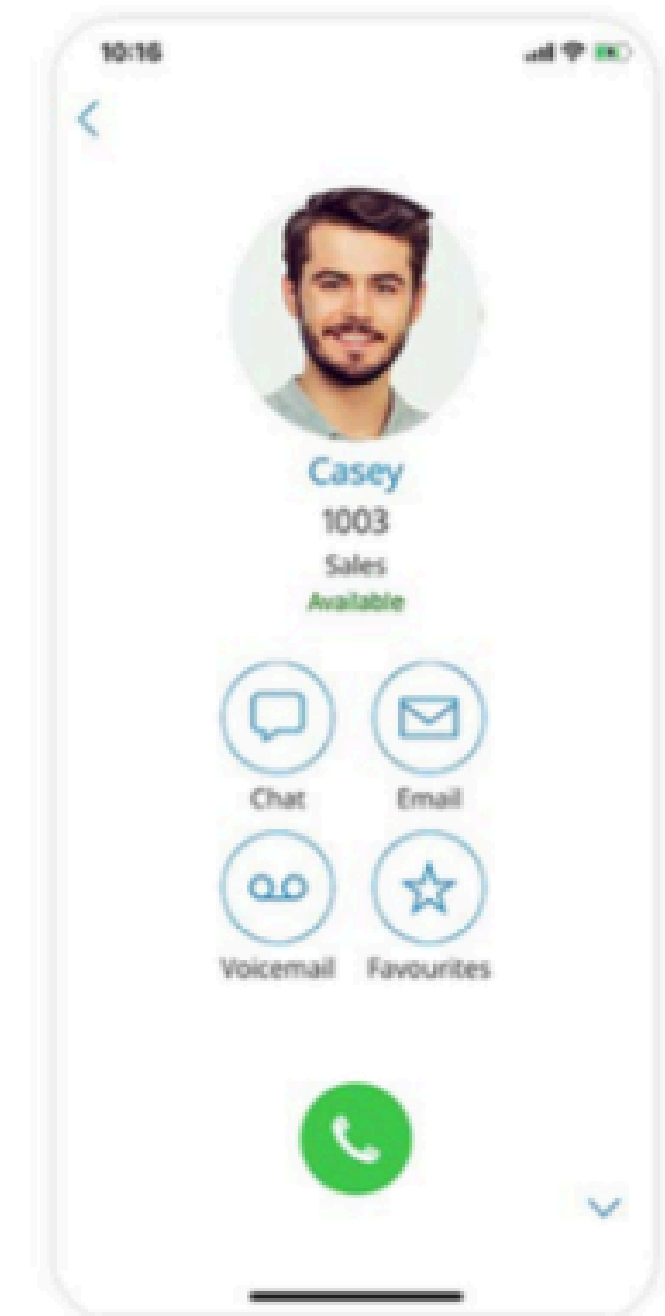

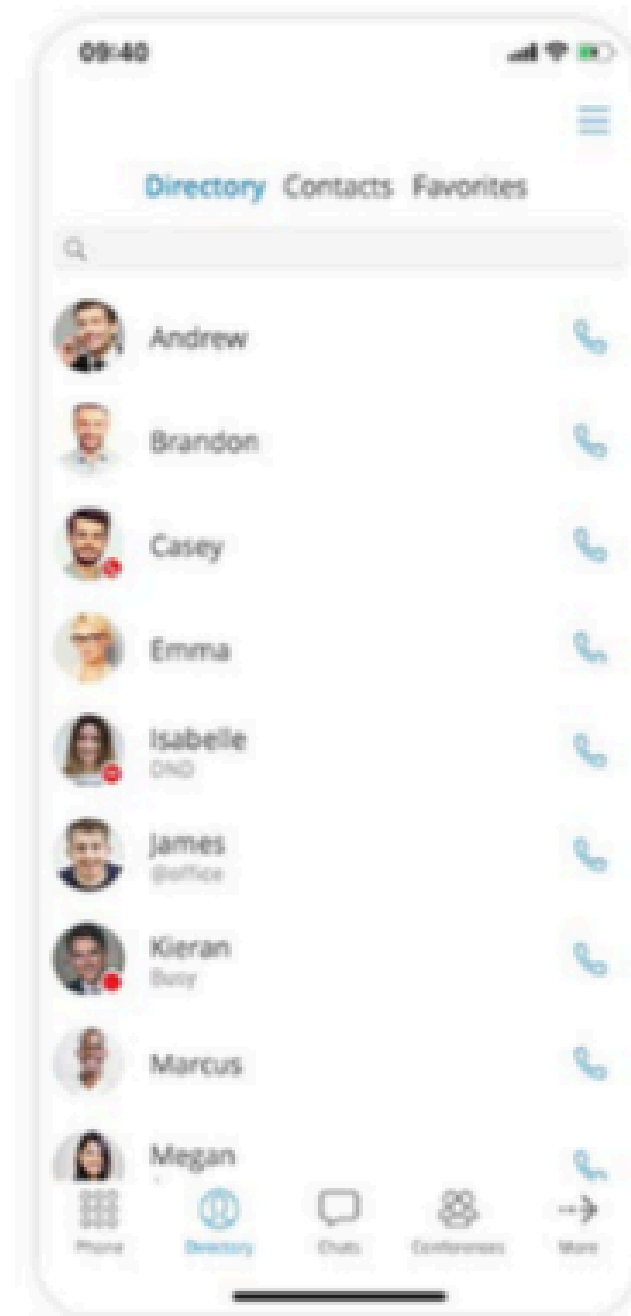

Bring your PBX functionality on a
smartphone wherever you go

BLUEHUB MOBILE

A Mobile Unified Communications application designed to provide business users with a set of features and benefits capable of transforming your company's communications system into a real powerhouse. It is available on Google Android and Apple iOS.

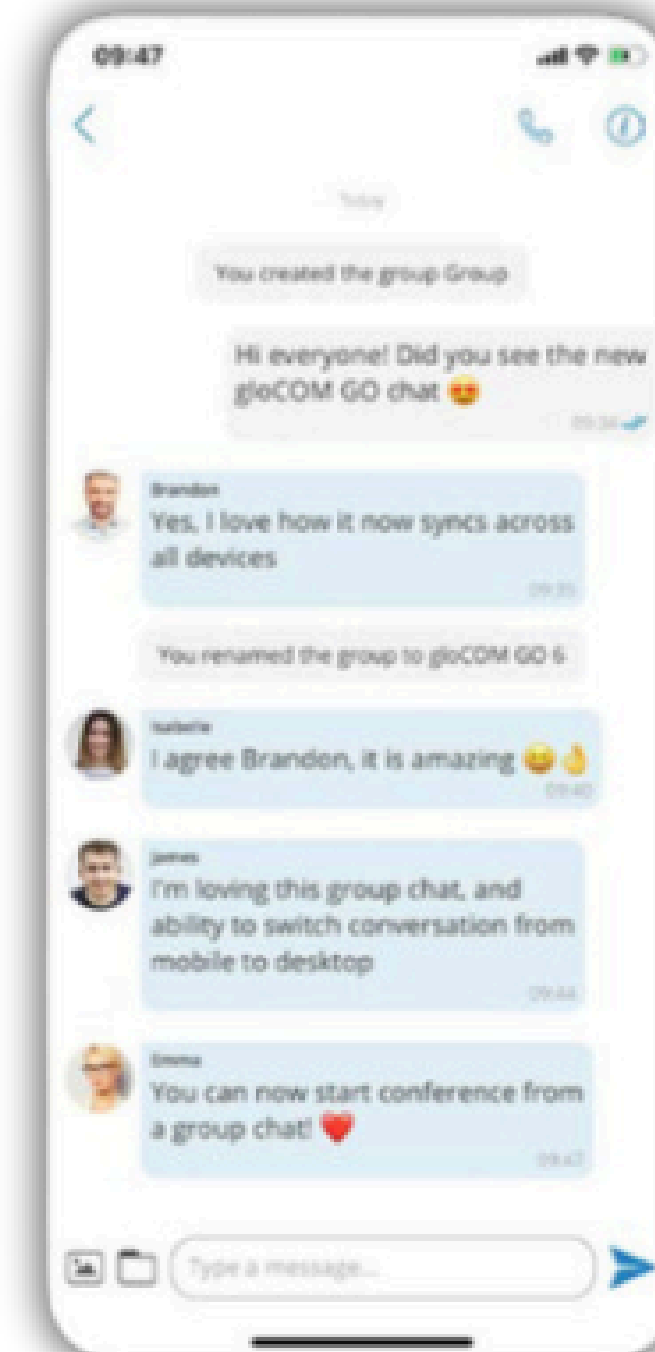

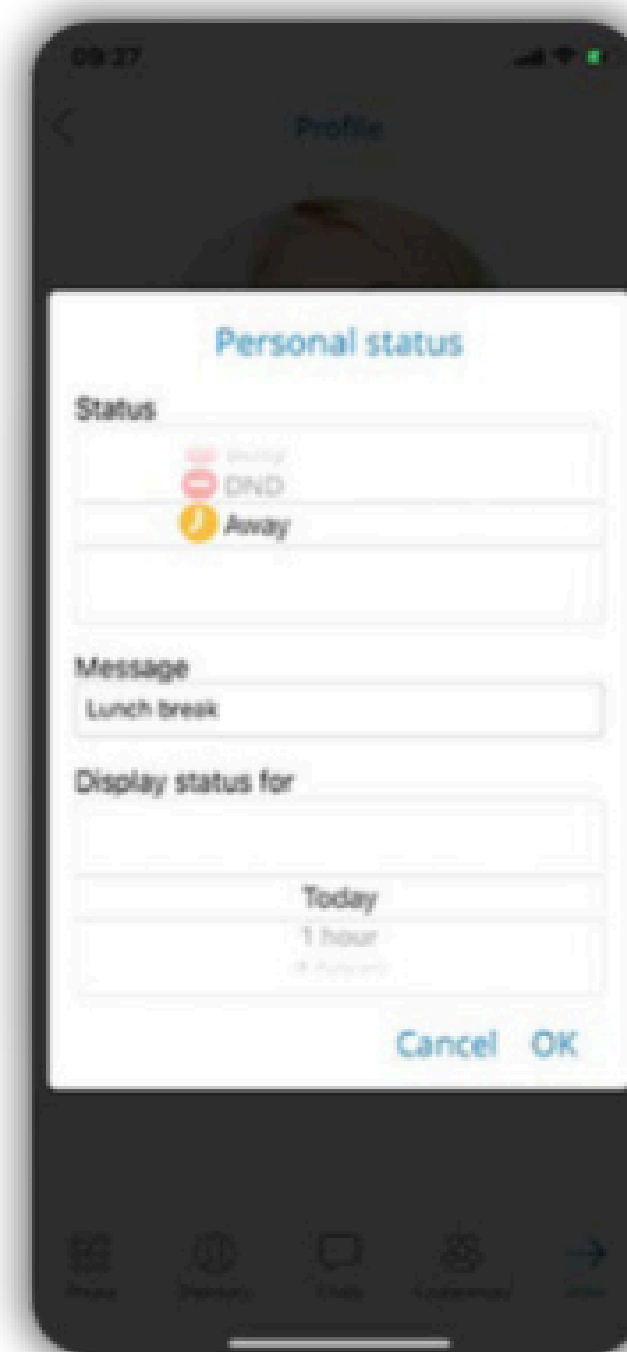

Experience efficiency at its best with the Unified Communications app. Plan phone calls, control your time, and define availability using the Presence panel functionality integrated with PBX.

Presence and Chat

Presence is now synced between all of the users' devices. Users can update their presence in the app's Profile section by selecting their current status. Users can start one-on-one or group chats. The chat is fully synced between all users' devices (Desktop & Mobile). Users can rename, add participants or start conference calls from existing group chats. Chat messages can be copied by long pressing on the message bubble.

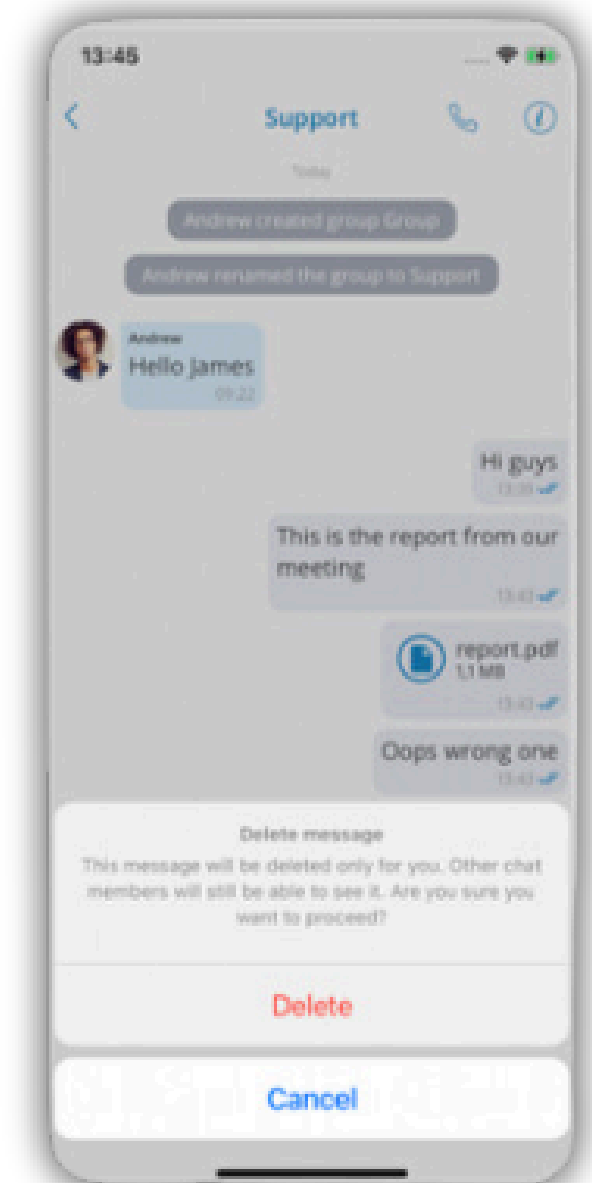

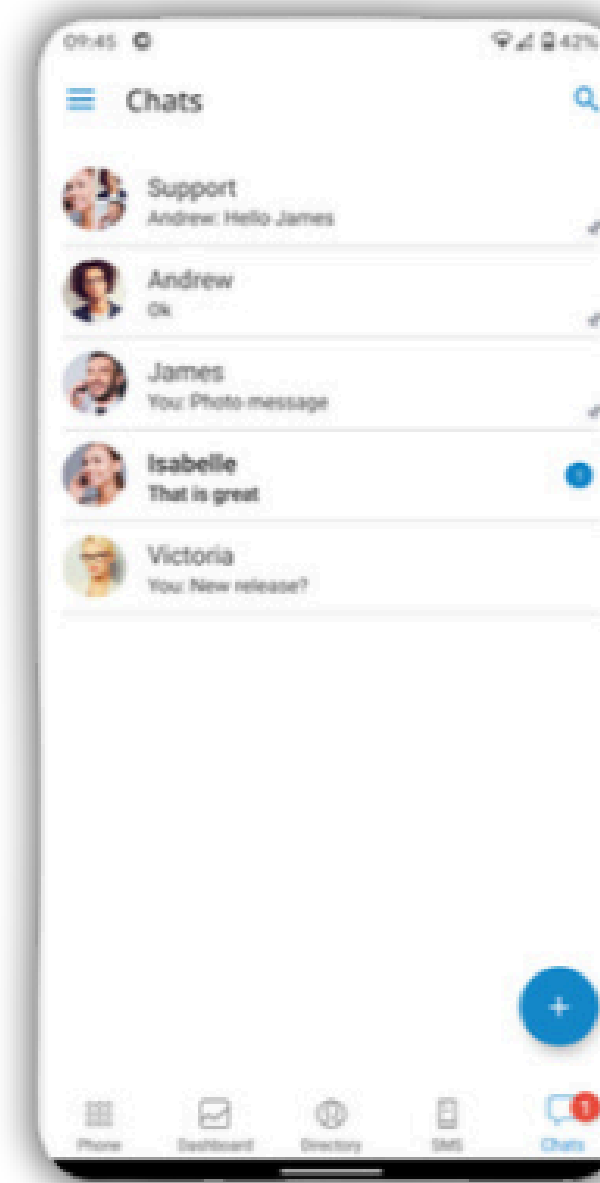

Improved Usability

Allows users to mark any chat conversation as read or unread. When the conversation is marked as 'unread', the unread indicator will be displayed for this conversation. If any action within that conversation occurs, the unread indicator will be removed. Also, opening that conversation or marking it as read will remove the unread indicator.

Users can rearrange pinned conversations following their needs by using drag and drop. This allows them to prioritize pinned conversations.

v6.4 brings a delete chat messages option to users that allows deleting desired messages. The confirmation dialog will show up with two options for outgoing messages - "Delete for myself" and "Delete for everyone." For incoming messages, there is only one option - "Delete for myself." After deleting the message, the message delete indicator shows up.

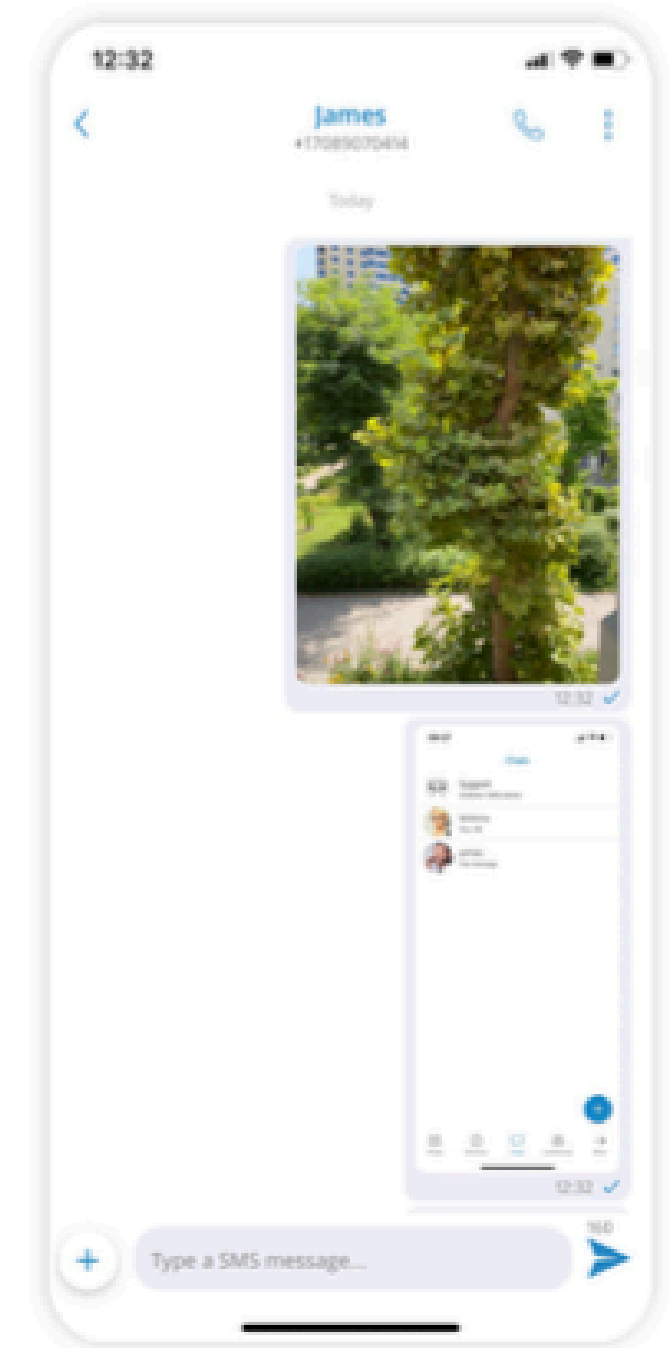

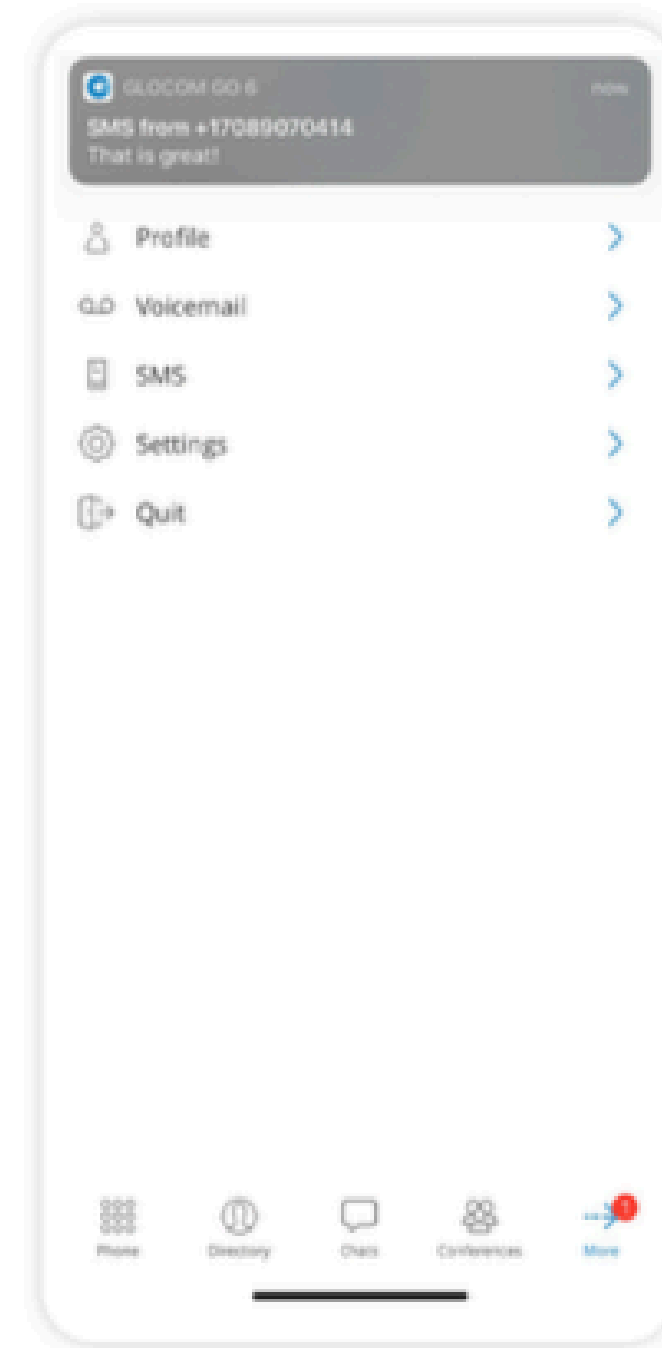

SMS & MMS messaging

The SMS feature allows you to send & receive SMS messages for iOS & Android platforms. A search of existing SMS conversations and a full-text search function inside an SMS Conversation are also provided.

If a file is selected, an SMS message becomes an MMS message, which can be seen on the right side of the 'Send SMS/MMS' button as the counter of the remaining kilobytes is displayed instead of the character counter.

The MMS message is an enhancement to the standard SMS message. The main difference between SMS and MMS messages is that the user can send multimedia and other files in their messages. It includes media such as videos, pictures, audio clips, GIFs, and much more.

Call History Sync

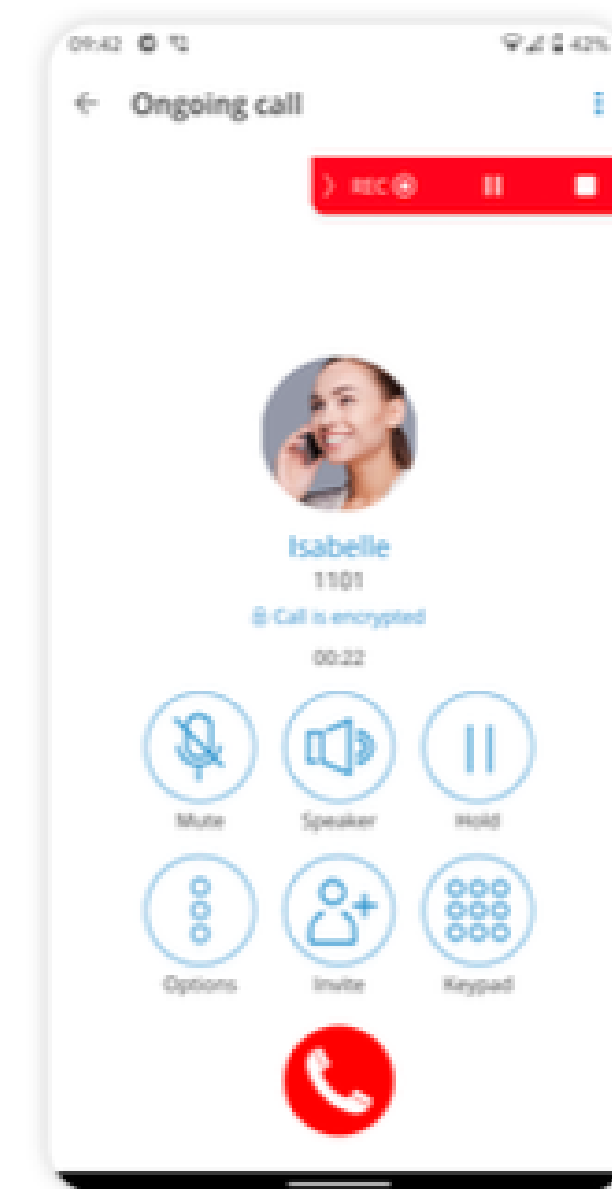

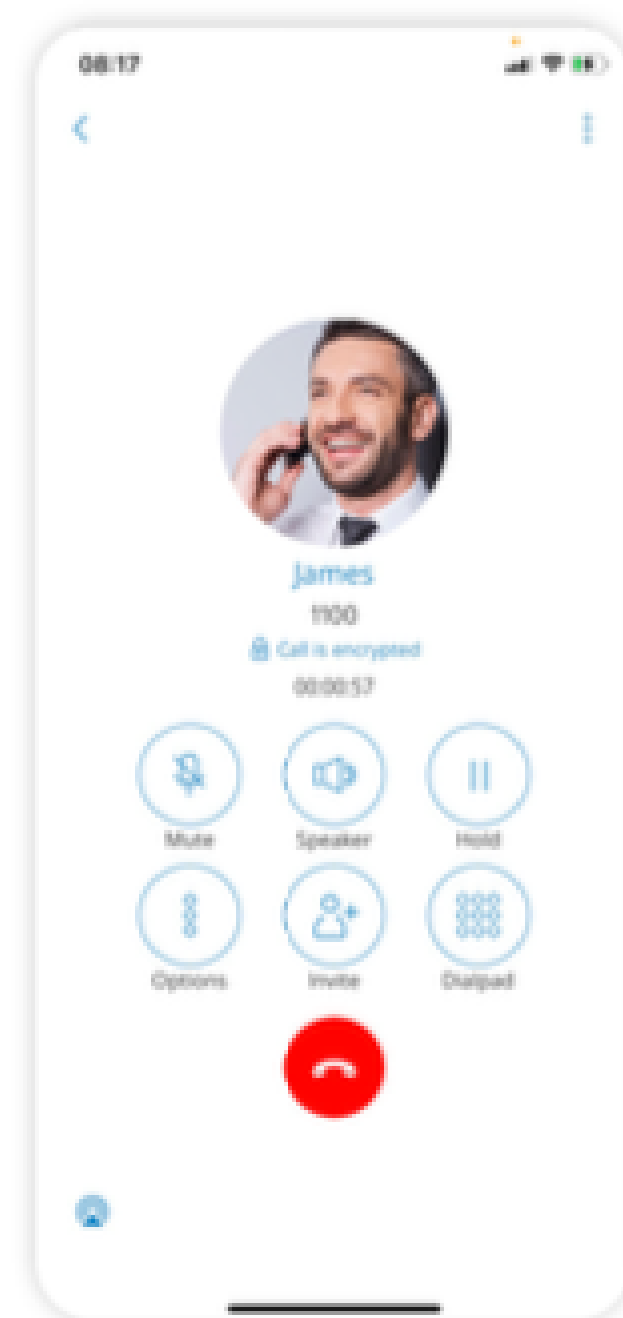

Starting with v6.4, call history sync between desktop and mobile apps is available. Now when you log into your account and navigate to the Recents tab, you will find your call history. Each call you make on the desktop will be reflected on your mobile device. Marking and deleting of calls are also synced between devices.

Call Encryption Indicator

v6.4 brings an indicator that shows call encryption if a call is encrypted. Call encryption settings are configured on the server by default, but users can override them within PBX.

Call Recording Indicator and Control

This feature allows users to start a call recording at any moment during the call. Once the call recording is activated for a call, the indicator on the ongoing call screen is visible, showing that the recording is active. In addition, users can pause/unpause and stop the recording.

Unified Connections

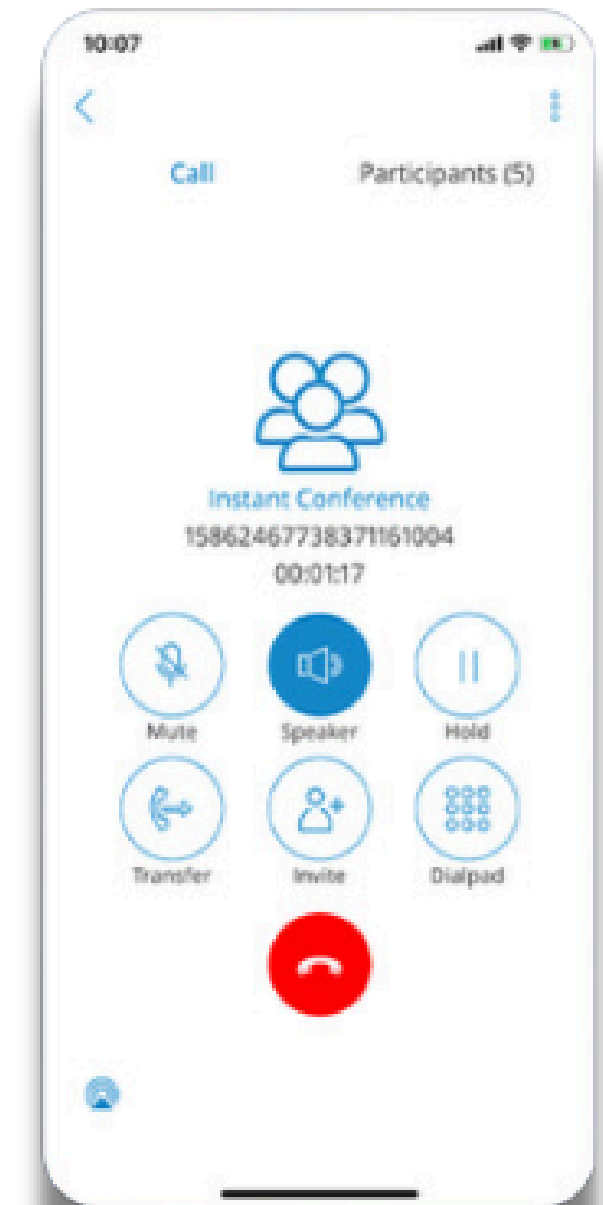

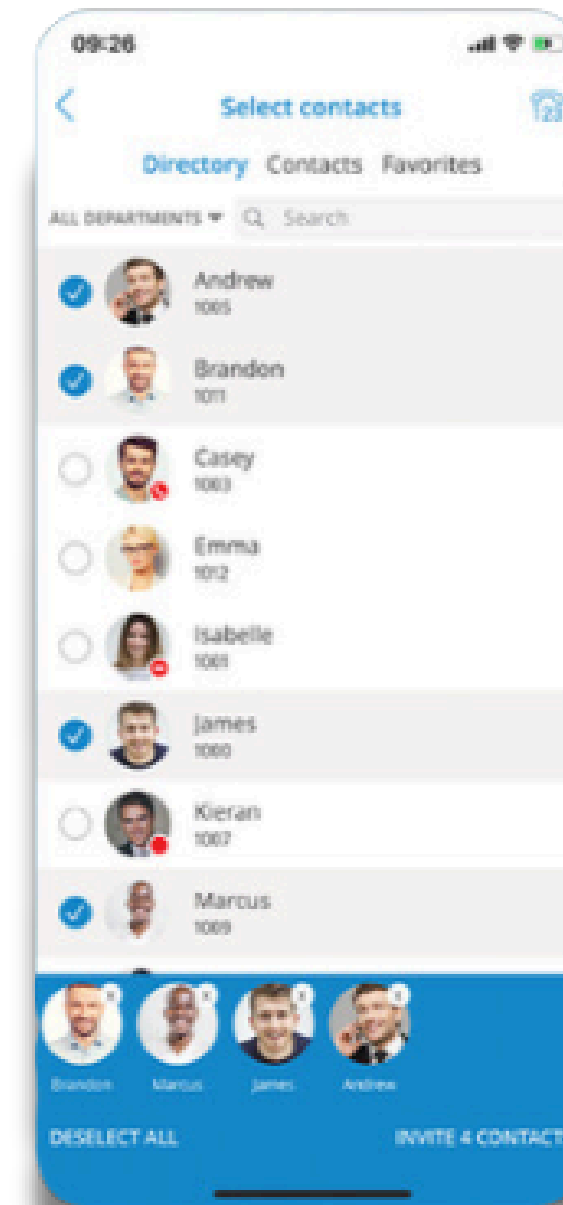

Allow you to access all of your connections, including the ones on PBX from any device.

Conferencing

Allows you to join existing static and dynamic conferences on the system, check conference participants and invite new users to the conference. Depending on the assigned conference privileges, users can also mute and kick conference members out of a meeting.

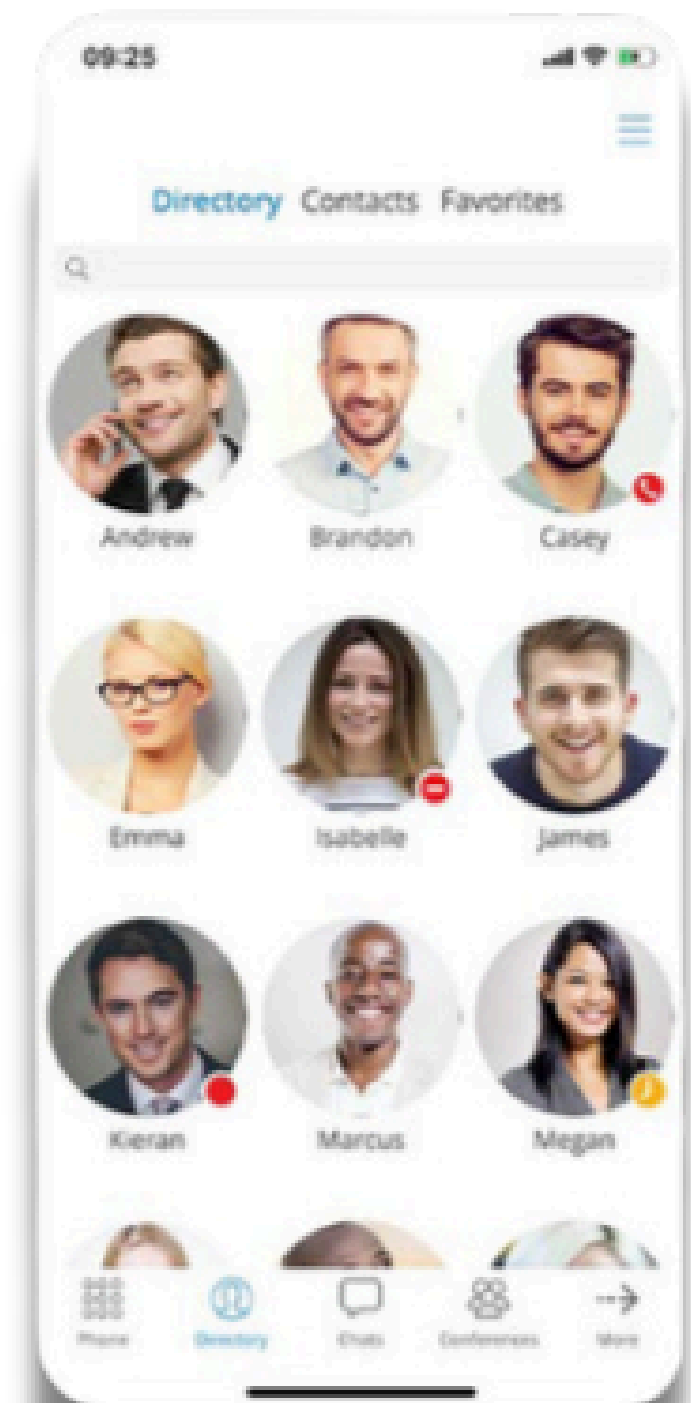

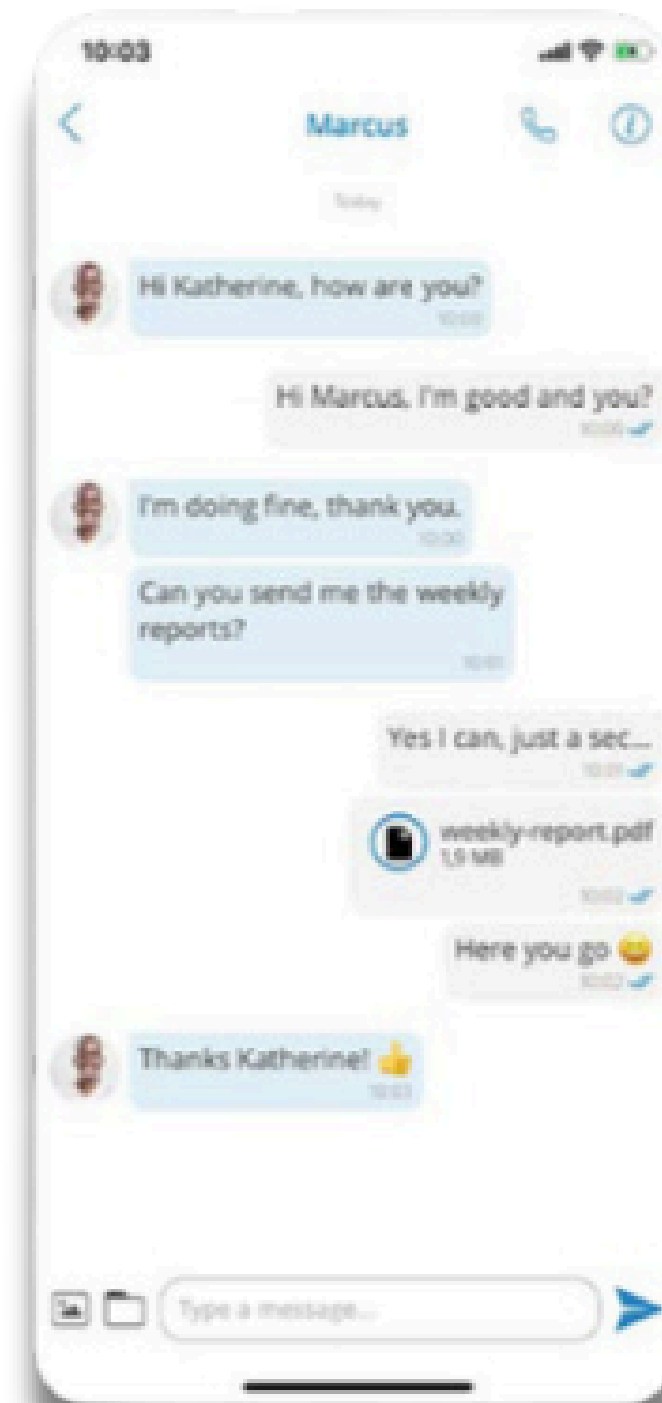

Visual Voicemail

Allows you to easily manage your voicemail messages from a mobile phone.

File Sharing

Users can send images, videos, documents, or any kind of files that don't exceed the file limit set in PBX. It is possible to cancel file transfers and restart them after some time. Images and video files are being compressed to reduce network traffic if they are picked from the gallery picker.

24/7 EXPERT SUPPORT AT YOUR FINGERTIPS

Rest assured with round-the-clock support. Our highly trained experts are always available to address any system-related issues or questions that you may have, ensuring seamless operations and peace of mind.
